WE DEAL WITH VESDA / AIR SAMPLING SYSTEM

VESDA Systems are aspirating smoke detection used for early warning applications where response to a fire is critical. VESDA® works by continually drawing air into the pipe network via a high efficiency aspirator. A sample of this air is then passed through a dual stage filter. Air sampling fire detection devices alert building occupants to smoke or fire by detecting changes in a room's air quality to indicate early signs of combustion, even before the presence of smoke. Early detection is key to controlling fires

FORTIFYING YOUR SPACE AGAINST FIRE RISKS.

WE DEAL WITH PUBLIC ADDRESS & VOICE EVACUATION SYSTEM

POOL GUARD SYSTEM

- Pool Guard system consists of Control Panel, Wireless unit having the range of 100 Meter, Pool Guard Unit, and GSM Auto Dialer unit
- The System meant for detecting the entry to the swimming pools after the specified timing in Pools.
- The system detects the activation of the guard unit through the wireless system connected to the Control Panel for triggering to notification units omissions
- The Control Panel alerting to the sounders and the Interface units, integrated with Fire Panel, if required
- After the activation, the GSM dialer dials to Mobile Phones (Maximum 5) giving the recorded message and text to the Phones for immediate action
